

Rabbits

By Rebeka, Kendall and Gigi

Appearance

Rabbits' legs are long and their ears are too. They have long ears for hearing predators. Rabbits have large eyes for seeing predators. They also have fluffy tails.

Habitat and Diet

Rabbits live in small fields. They also live inside burrows. Rabbits also live in woodlands.

Life Cycle

The male and the female have warrens. The female goes and finds food for the warren. In the winter, rabbits hibernate. If rabbits can't find shelter they find tall grass.

Adaptations

When bad weather comes, rabbits hibernate.

Interesting Facts

Bald eagles eat rabbits. Great horned owls also do. Foxes eat them too. Did you know rabbits have 28 different species?
